

Važnost meteorologije u praćenju onečišćenja zraka

*The role of meteorology in air pollution
monitoring*

Ana Alebić-Juretić

Nastavni Zavod za javno zdravstvo

Teaching Institute of Public Health

Rijeka

- Povijesni pregled
- Stara klasična/kemijska mreža
- Automatska mreža
- Važnost meteorologije u praćenju kvalitete zraka

- Historical view*
- Old classic/chemical network*
- Automatic network*
- The role of meteorology in air pollution monitoring*

1. Povijesni pregled

- 1973 – Rijeka: SO₂, crni dim, UTT
- Krajem 70'- proširenje na Bakarski zaljev
- 1980 –NO₂, NH₃, H₂S, TSP,PAHs
- Sredinom 80' – analiza oborina
- 1986: proširenje na Krk i Cres
- 1995: Gorski kotar

1. Historical view

- 1973- Rijeka: SO₂, *black smoke, dustfall*
- Late 70' -extension to Bakar bay
- 1980 –NO₂, NH₃, H₂S, TSP,PAHs
- Mid 80' - analyses of precipitation
- extension to the islands of Krk and Cres
- 1995: Gorski kotar area

2. Klasična /kemijska mreža

Classic/Chemical network

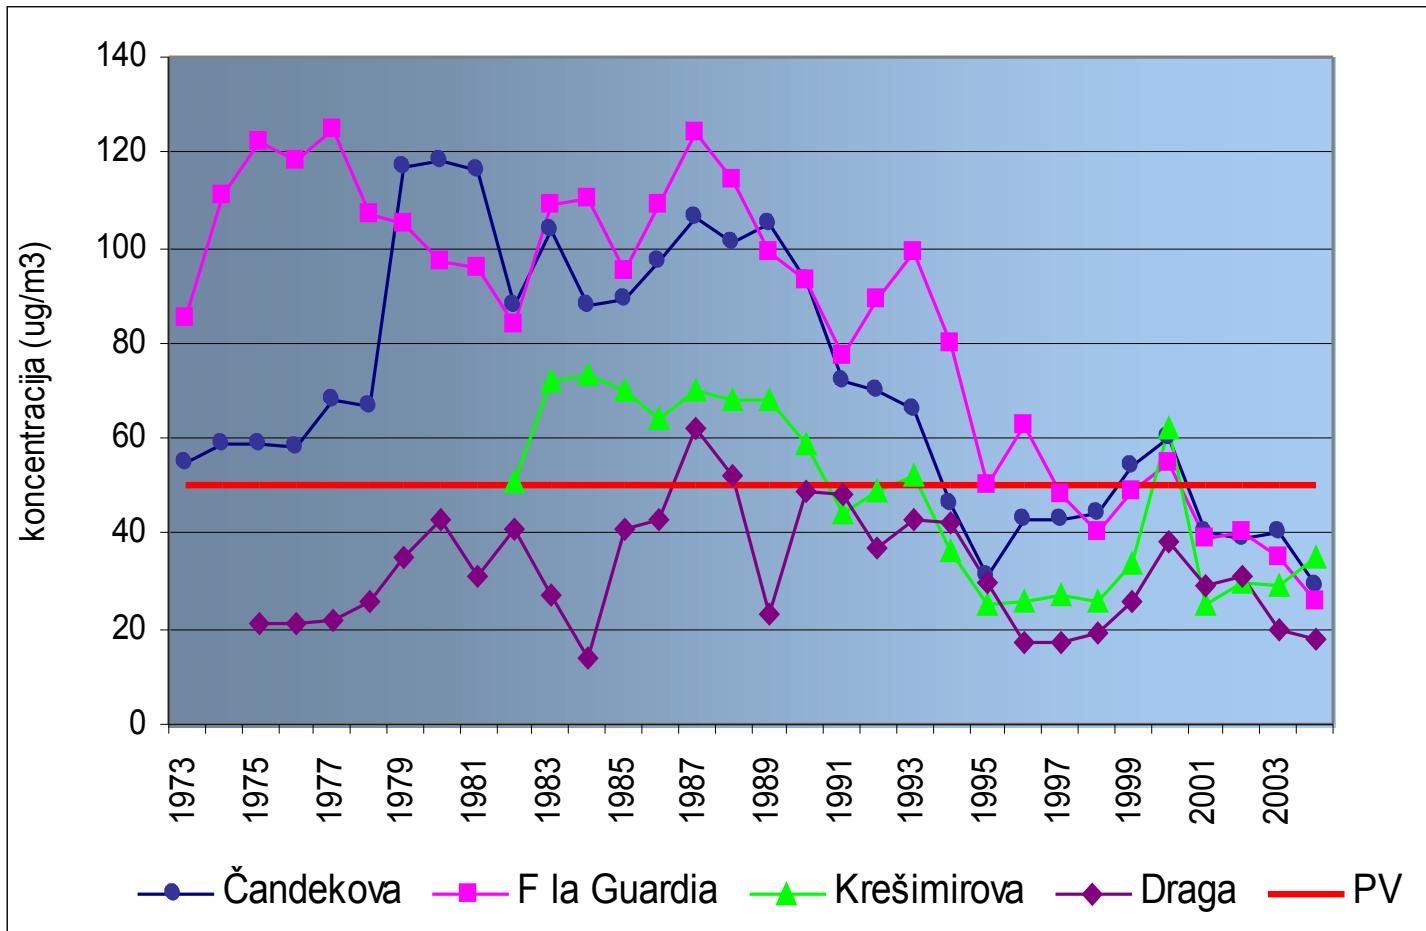

Analiza sakupljenih uzoraka

Chemical analyses of the collected samples

Trend SO₂

Long term trends - SO₂

Prosječne dnevne koncentracije pogodne za:

- Trendove
- Prostorno planiranje
- Retrospektivne studije izloženosti populacije

ali **ne** za:

- Identifikaciju zagađivača
- Pravovremeno djelovanje na izvor

Daily mean concentrations suitable for:

- Trends
- Spatial planning
- Retrospective studies on human exposure

but not for:

- Source identification
- Prompt action on pollution source

3. Automatska mreža

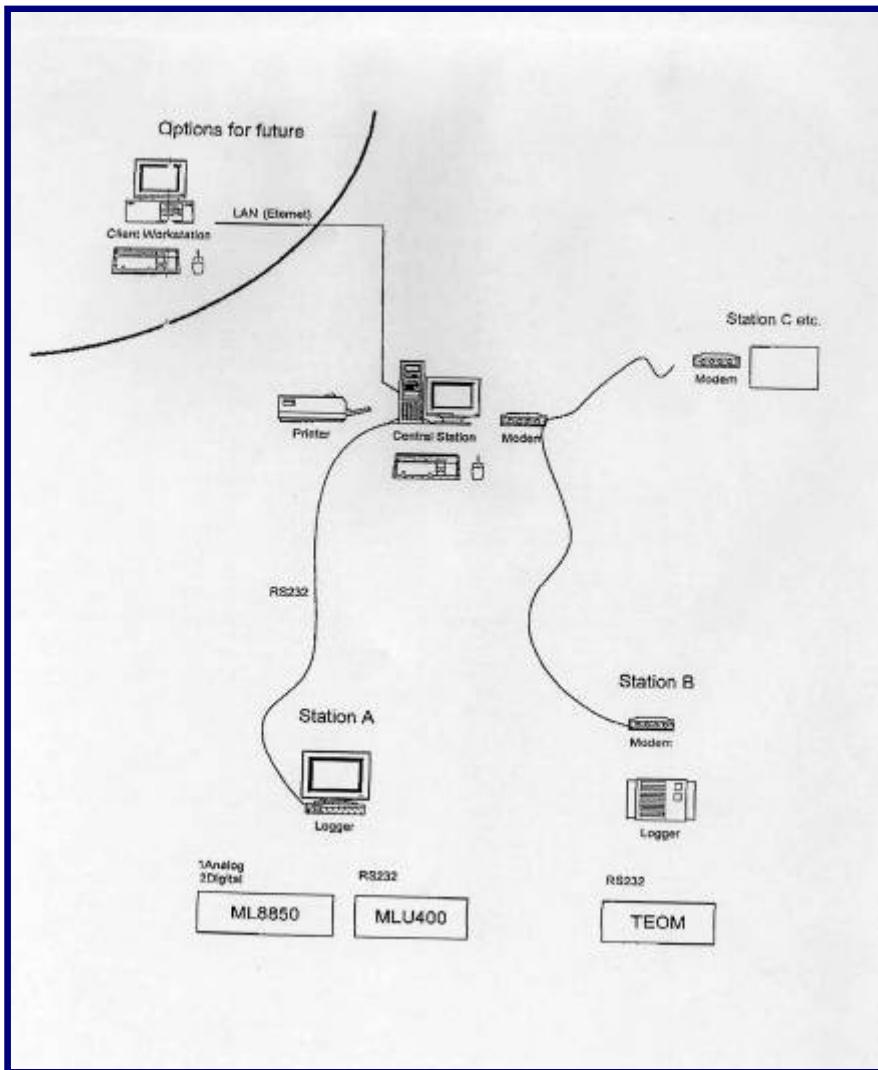

Automatic network

1989: SO₂

1998: O₃

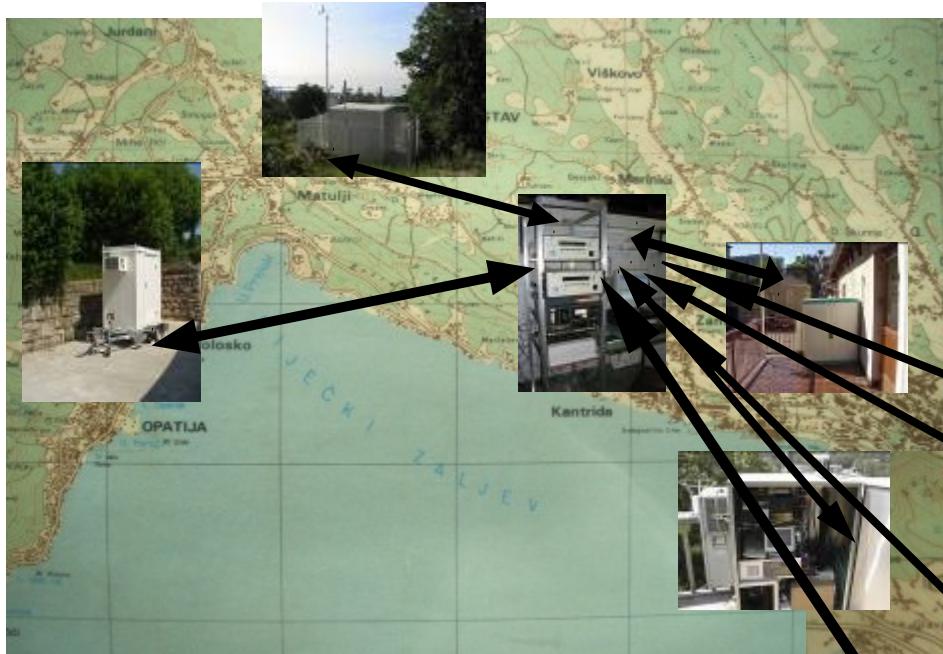

2000: Prva automat-ska mreža za praćenje kvalitete zraka

2000: The very first air monitoring network in Croatia

Proširenje mreže 2003:

Extension of the network in 2003

Koncentracijske ruže – identifikacija izvora

Concentration roses – source identification

Identifikacija izvora: različit od prijašnjeg!

Source identification: different from the previous!

Je li to dovoljno?

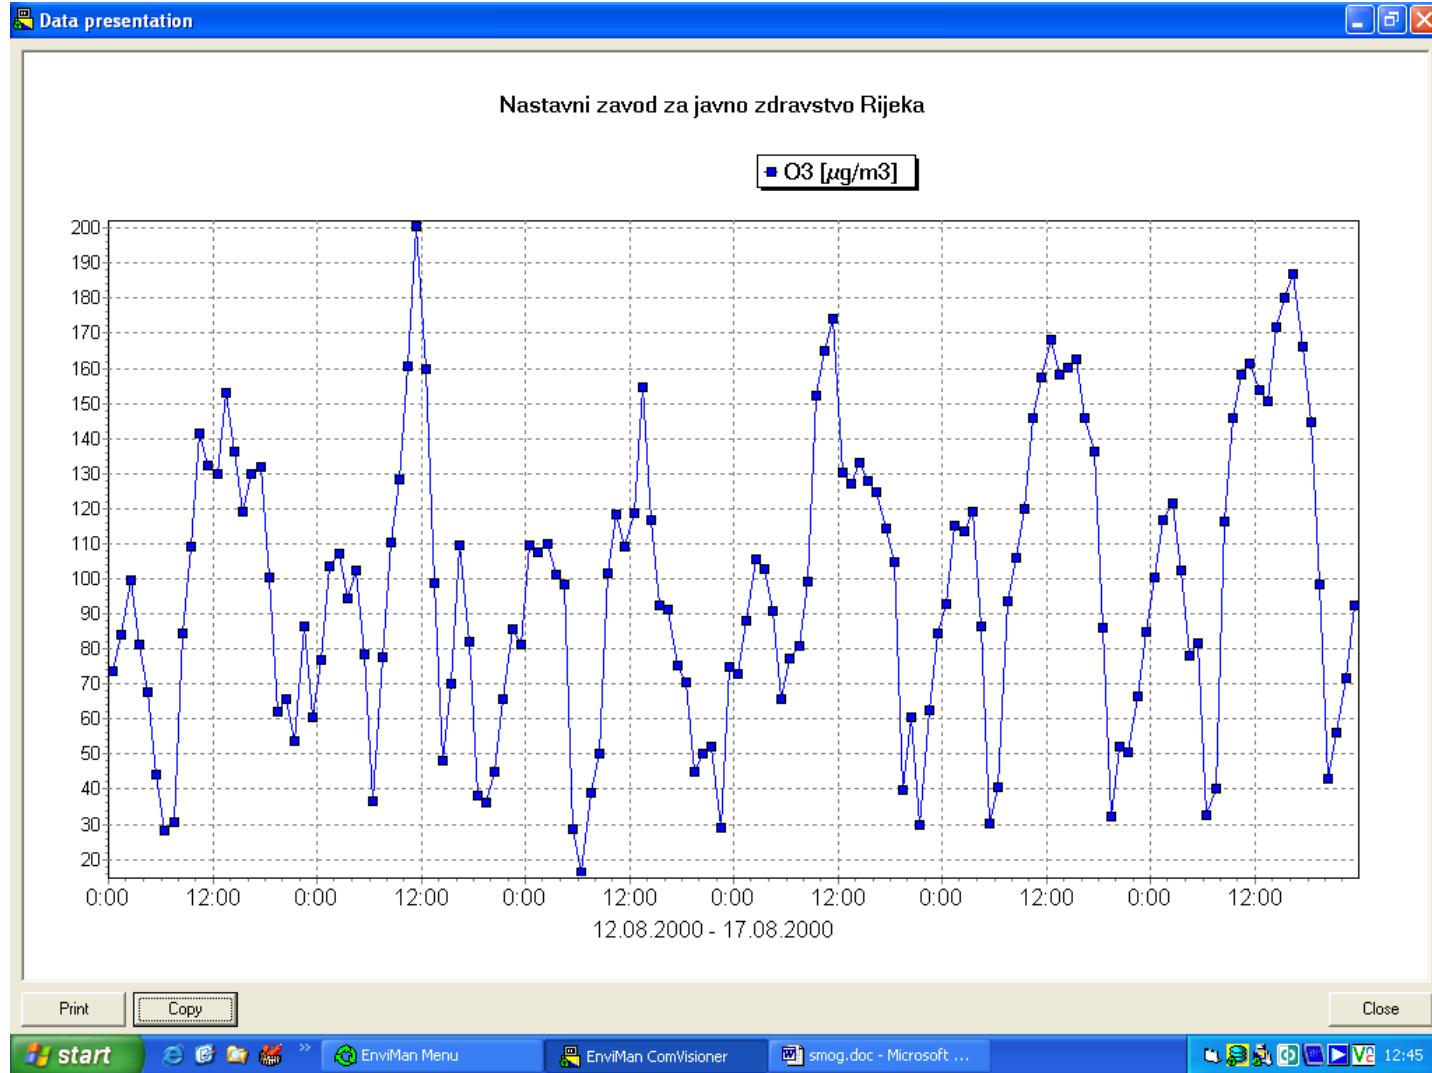

- Možemo identificirati glavni smjer donosa-izvor
- Imamo trenutne vrijednosti za poduzimanje mjera
 - ali...
- Postoje situacije koje ova oprema ne može riješiti

Is that enough?

- *Pollution source can be identified*
- *Real time concentrations are available to enforce pollution abatement*
 - but..*
- *There are conditions that cannot be solved with this equipment.*

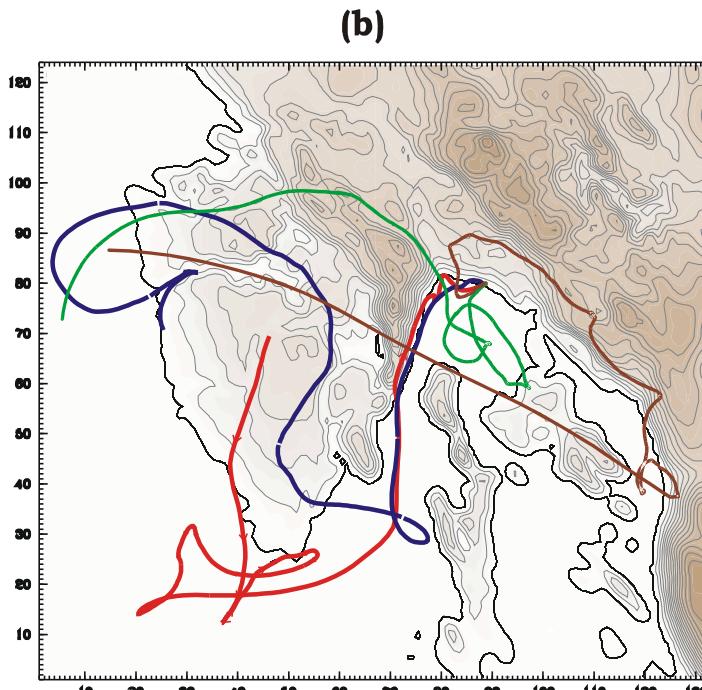

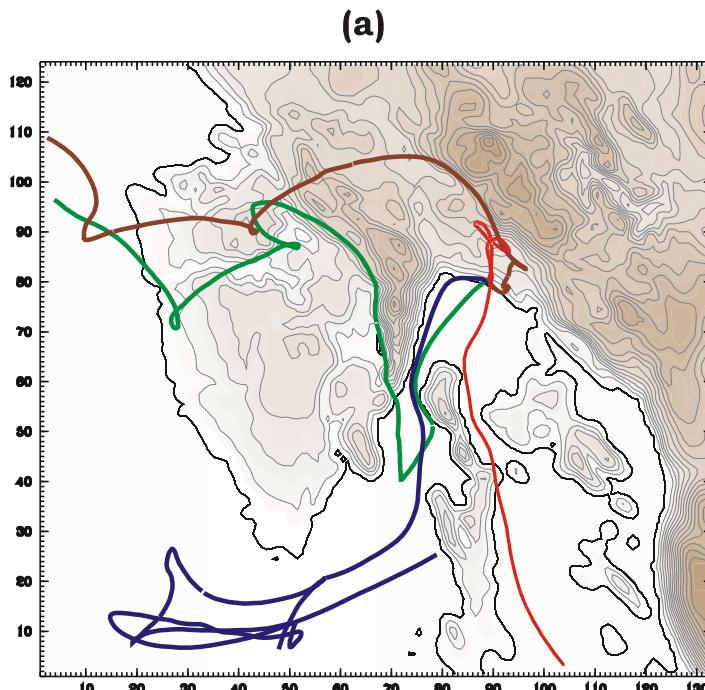

Tu dolazi meteorologija! *Here the meteorology comes!*

1. Povišene konc. O₃ 1. *Elevated O₃ conc.*

2. Daljinski transport utječe i na lokalno onečišćenje.

Long range transport affect the local pollution.

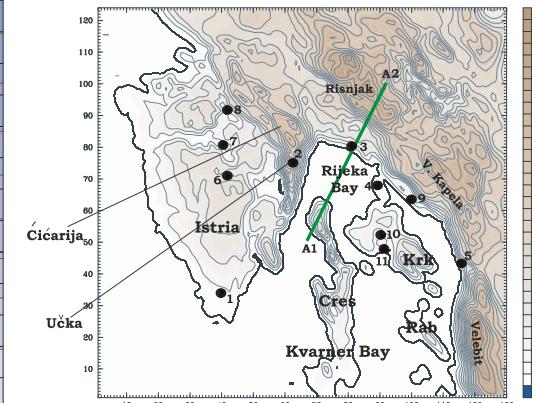

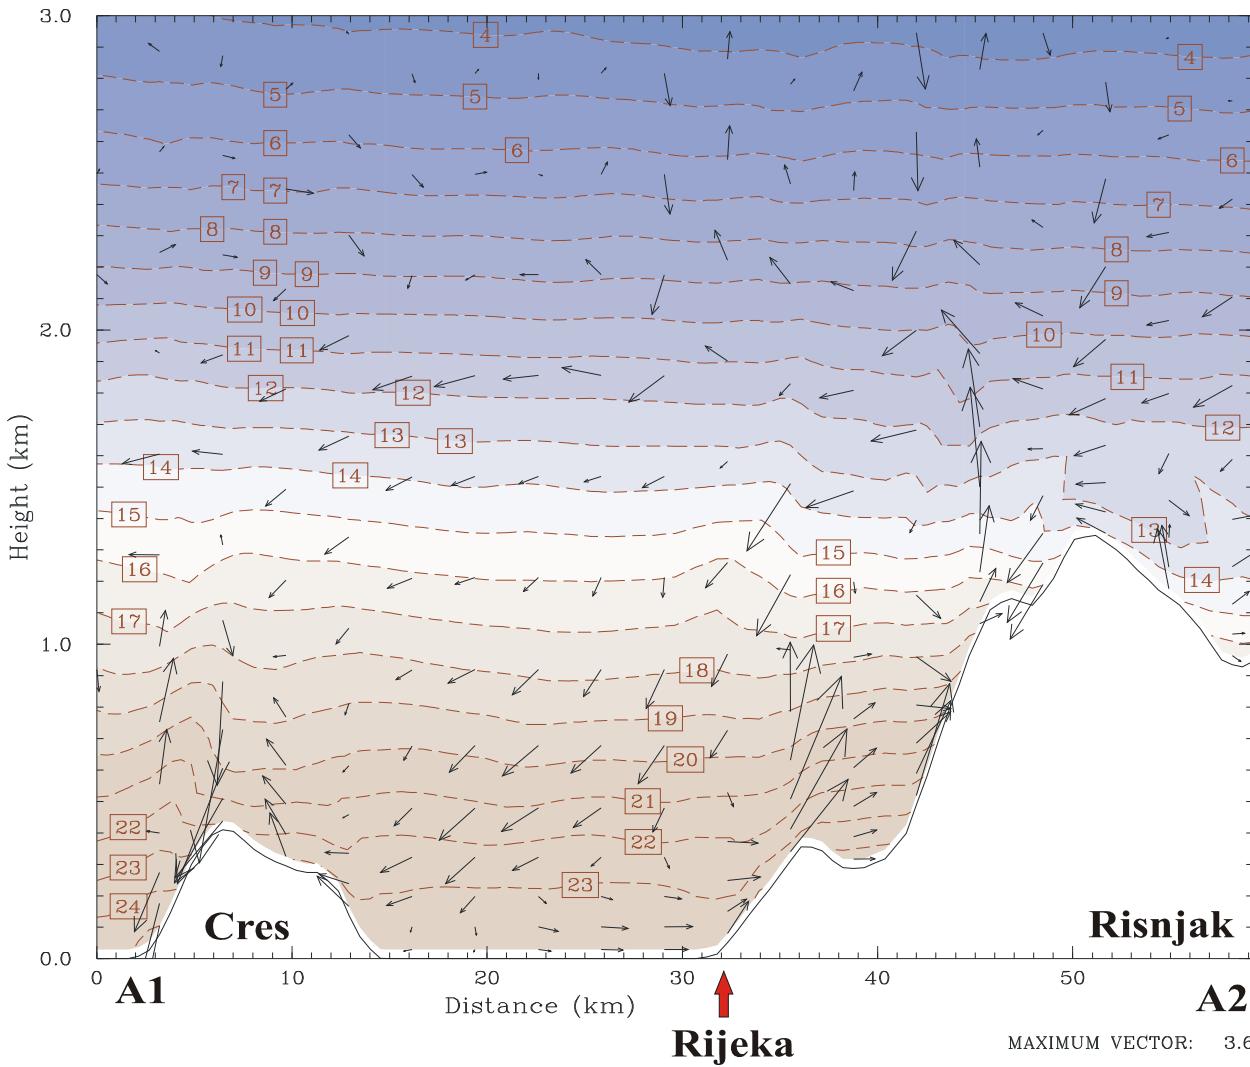

2-day backward 1000 hPa trajectories arriving at Rijeka every six hours (02 LST (red), 08 LST (brown), 14 LST (green) and 20 LST (blue) starting from (a) 18 August 2000 and continue on (b) 19 August 2000.

3. Bolje poznavanje lokalne meteorologije (PGS) *Better knowledge of local meteorology (PBL)*
